SMARTFLOOR™ FLEXIBLE FLOORING SYSTEM

SmartFloor provides the flexibility to meet changing ridership needs

SmartFloor meets all ADA & FMVSS requirements... and is GSA Approved

SmartFloor is fully tested to meet rigorous US safety standards

Over 30,000 worldwide installations

SmartFloor is the #1 flexible flooring system in Europe and North America. This innovative modular technology allows for quick and easy movement of seats and wheelchair positions nearly anywhere within a vehicle. NEMT vans and transporters can now be converted from ambulatory to wheelchair transport and back as often as needed, taking less than a minute per seat to install or remove. SmartFloor can also be ordered with popular floor coverings, such as Altro Transflor.

GSA & State Bid Contracts

Approved by the GSA, SmartFloor has been listed on the GSA Federal Contract since 2014 – and continues to be added to many State bids. It's also approved by Transport Canada.

Why Insist on SmartFloor?

- Innovative seat bases with wheels means no lifting. Simply roll to the lift for removal or move to another spot to make room for wheelchairs.
- Constructed with 1-1/4" extruded aluminum, SmartFloor adds significant strength to unibody frames currently found in the Ford Transit and Ram ProMaster.
- Installed as one piece with automotive-grade adhesive, there's no risk of exposed bolts causing damage to the underbody or other components.

Approved State Contracts

- Arizona
- California
- Delaware
- Florida
- Kansas
- Kentucky
- Louisiana
- Michigan
- New Mexico
- New York
- North Dakota
- Oregon
- Pennsylvania
- Texas
- Virginia
- Washington
